

METHOD AND APPARATUS FOR LEVELING A SHADE

ABSTRACT OF THE DISCLOSURE

Some embodiments of the invention significantly increase the safety of shades
5 attached to light fixtures by allowing movement of the shade in all directions relative to a
fixed light fixture while at the same time preventing the shade from coming too close to a
light bulb. Some embodiments of the invention provide a method of leveling a shade by
using the natural balancing point of the shade. Other embodiments of the invention are
described in the claims.
